Mobile: +91 7976799700

SKILLS

Languages: C++, Python, C, JAVA, SQL, Matplotlib / Seaborn
Tools/Platforms: Numpy, Pandas, TensorFlow, PyTorch, Git, Google Colab
Soft Skills: Problem-Solving, Team Work, Quick Learning

PROJECTS

Stock Price Prediction | Python, Pandas, NumPy, Scikit-learn, Machine Learning Apr' 26

- Preprocessed and analyzed historical stock market data, performing feature engineering and normalization to identify trends and patterns influencing stock prices.
- Developed and evaluated machine learning models to predict future stock prices using historical price, volume, and technical indicators.
- Visualized actual vs. predicted prices and model performance using Matplotlib, providing insights into market trends and prediction accuracy.

Academic Outcome Predictor | Python, Scikit-learn, Pandas, Streamlit Mar' 26

- Engineered a modular ML pipeline (data generation, preprocessing, training, evaluation) with a custom scikit-learn transformer for outlier handling, imputation, and scaling.
- Trained and compared Logistic Regression and Decision Tree classifiers to predict student performance categories, automatically deploying the best-performing model.
- Built an interactive Streamlit app with real-time prediction simulation, confidence-distribution charts, and a model lab for confusion matrices and feature importances.

SafeShe Website | HTML, CSS, JavaScript Sep' 24

- Developed a women's safety website providing essential information about women's rights, safety awareness, and available support resources.
- Designed a simple and user-friendly interface to help users quickly access important safety information and guidance.
- Implemented emergency-support features allowing users to share their location and contact a trusted person during problematic or unsafe situations.

TRAINING

Agentic AI and Large Language Models (Edtech Company) Jun' 23 – Jul' 23

AI technology, LLMs, Prompt Engineering

- Emphasis was given to understanding Python programming, Streamlit application development, Large Language Models (LLMs), Agentic AI concepts, prompt engineering, Natural Language Processing (NLP), API integration, Git and GitHub version control.
- The project developed during this internship, ToneShift: Audience-Aware Rewriter, demonstrates the practical implementation of Agentic AI and Large Language Models by integrating Python, LLM API, Streamlit.
- The training focused on industry-oriented learning by encouraging students to design and implement AI-driven applications using professional software development practices.

CERTIFICATES

WEB-A-THON - United Latino Students Association Aug' 24
Programming with Generative AI - Indian Institute of technology Guwahati Mar' 25
Data Visualization in Excel - Macquarie University Jun'25
Sorting and Searching ,and Randomized Algorithms - Stanford University Jul'25

EDUCATION

Lovely Professional University Phagwara, Punjab
Bachelor of Technology Aug' 26 – Present
Computer Science and Engineering; CGPA: 7.64

Indian Institute of Technology Guwahati Guwahati, Assam
BS Hons, Data Science and Artificial Intelligence; CGPA: 7.60 Aug' 26 – Present

Rakesh Academy Siksha Samiti Pilani, Rajasthan
Intermediate Mar' 22 – May' 23
Percentage: 85.2%
